

Prerequisites

This seminar was developed for software developers who are already familiar with web application development (both the server and the client) and have a strong background in JavaScript.

Duration

This seminar includes 4 academic hours.

Premium Training

This seminar can be delivered either in Hebrew or in English. It can be delivered online or in a Hybrid way that allows the participants to choose whether to attend the meeting room where the training takes place or to join online.

The Lecturer

This seminar is delivered by Haim Michael, an experienced, well-known software development trainer with more than 25 years of experience in software development training.

The Topics

This seminar was developed based on practical experience of more than 25 years with web applications development, and it includes the following topics:

What is a Cookie?

We will explain the way the cookies work and get into details in accordance with the specification. We will show how we can access these cookies both from the server and the client.

Cookies and JavaScript

We will explain and demonstrate how to access the cookies on the client side using simple plain code in JavaScript. We will also show how simple it is to write code in JavaScript that sends the content of the cookies to the hacker's website using Ajax.

HTTP Only Cookies

We will explain what are HTTP cookies, how to create HTTP only cookies and how we can use them in order to secure our websites. We will also overview those cases in which HTTP only cookies don't fit and what can be done in order to allow us to use them.
