Static Analysis Tools in Python

Prerequisites

This seminar was developed for software developers with some experience in Python programming.

Duration

This seminar includes 2 academic hours.

Premium Training

This seminar can be delivered either in Hebrew or in English. It can be delivered either online, or in a Hybrid way that allows the participants to choose whether to attend the meeting room where the training takes place or to join online.

The Lecturer

This seminar is delivered by Haim Michael, an experienced well-known software development trainer with more than 25 years of experience in software development training.

The Topics

This seminar starts with a small introduction to static analysis tools in software development, and continues with overviewing some of the most popular libraries and tools we can use to perform static analysis to our code. This seminar covers tools and libraries that allow us to perform various types of analysis, including code styling, unused code detection, and security issues finding.
